

UROLOGY

Our team consists of the highest quality surgeons from some of the country's best medical training programs. Many of our team have had additional fellowship training in complex urologic care. We also actively improve our knowledge through continuing education to ensure we are practicing the most current skills and techniques available to treat ALL urologic conditions.

Our urology team includes experts in urologic oncology, Female Pelvic Medicine and Reconstructive Surgery (FMPRS), transgender care, and all basic urologic needs. We operate on patients from all over the region at our partner hospitals, including Saint Joe's Medical Center in Tacoma, Swedish First Hill and our Kaiser Permanente campus hospital in Seattle, and Overlake Medical Center in Bellevue.

Our surgical physician assistants (PAs) and nurse practitioners (NPs) help us assess and treat our patients to provide excellent care. Our PAs/NPs may meet with patients at pre- and post-operative visits and treat patients that do not require immediate surgical care. Their knowledge and ability to help with patient care and assist our surgeons in the operating room is a tremendous asset to us and a big advantage for patients.

Our experienced team treats a number of complex urologic conditions:

- Advanced robotic and open surgery for all oncologic tumors and reconstruction
- Bladder cancer care requiring robotic and open radical cystectomy with urinary diversion
- Retroperitoneal lymph node dissection
- Complex pelvic floor dysfunction and reconstructive surgery, including urethral stricture disease
- Female fistula repair
- Voiding dysfunction with urodynamic assessment and InterStim placement
- Transgender care
- Xiaflex injections, Peyronie's correction, Penile prosthesis implantation
- BPH treatment including REZUM, TURP, ThuLEP, and robotic simple prostatectomy
- Other general urologic care including endoscopic and percutaneous stone treatment

Nataszka Posielski, MD
SUO Fellowship in Urologic Oncology (VMFH 2022)

Brian Winters, MD, FACS
SUO Fellowship in Urologic Oncology (UW 2019)

Daniela Kaefler, MD
Female Pelvic Medicine and Reconstructive Surgery (UCLA 2022)

Daniel Avery, MD
General Urology and Transgender Care

“ I had major surgery performed by Dr. Winters. He is an excellent doctor both in his communication and surgical skills. The surgery was complicated robotically and the result was almost no pain and no need for pain medication. This was a huge surprise to me. He coached me through the process, listened well, and answered all my questions. The nurses and support staff were also excellent. I recovered fast for this type of surgery and I am fully back to all my activities. ”

– Steven Rolfe, patient
