Exam Room Cleaning
Between Patients & End of Day

Supplies:

- PDI AF3 wipes-Gray top wipes
- PDI Bleach wipes-Orange top wipes
- Gloves

Between Patients:

- Perform hand hygiene before donning and after removing gloves
- Don PPE (gloves) before handling wipes
- Wear a cover gown if clothing may be soiled while cleaning
- Do not use the same wipe on different pieces of furniture
- For visibly soiled areas, use wipes to remove soil, replacing them when the wipe is dirty, until the wipe comes away clean. Then use a new wipe to put down disinfectant.
- Wipes must be moist to disinfect; discard when solid wet line begins to streak.
- Wipe from clean to dirty, from high surfaces to low surfaces.
- Let the disinfectant sit for the appropriate dwell time listed on the container: three (3) minutes for Grey Tops; four (4) minutes for Orange Tops
- Be familiar with surfaces and equipment in your department which could be damaged by use of standard cleaning products i.e. monitors.
- Keep items off the counters and floors so EVS can clean.

Equipment Cleaning:

- Clean and disinfect medical equipment (carts, IV poles, BP cuffs, Monitors, specialty equipment, commodes, mayo stands).
- Clean and disinfect reusable instruments that touched intact skin (stethoscopes, filaments, hammer, tuning fork, otoscopes, ophthalmoscope).
